UI & UX design plan · v1 for review

From a form-filling tool to a growth workspace

A plan to turn the Seller Growth Agent report into an interactive product with charts, trends, price-vs-sales analysis and an action board. Nothing in this document is built yet: it is the plan and a set of mock screens to react to.

Inside

1. Why the current UI falls short, and the design principles
2. Information architecture: 6 screens, one question each
3. Mock screens: Overview · Sales & Price · Customers · Competitors · Action Plan · 30-day check · Onboarding · Mobile
4. Indicator catalogue: every chart, its data source, what is new to compute
5. Technical approach, phased delivery, risks, decisions I need from you

Example of what the data can already say: price and volume on one chart.

1 · Diagnosis

Why it feels like a form, and what we change

What the product feels like today

- **Linear, one-shot flow.** Create project → upload → click Run → read a long page. There is nothing to come back to or explore.
- **Tables and paragraphs, almost no charts.** A trend (revenue slipping 13.8% since April) is a sentence, not a picture you can see in one second.
- **The report is a document, not a workspace.** You cannot filter by product or period, or click a number to see where it came from.
- **Value only appears after a 4-minute agent run.** Yet the uploaded data alone could already draw most of the useful charts.
- **The plan is a checklist form.** No sense of impact, effort, or time.

Design principles for the new UI

1. **Answer first, detail on demand.** Each screen opens with its headline finding in one line, then the chart that proves it.
2. **Chart before table.** Every metric gets a trend, a comparison, or a breakdown. Tables sit behind "View data".
3. **Instant value.** Charts that need only your data appear seconds after upload, before the AI finishes. The agent adds the "why" and "what to do" on top.
4. **Every number is traceable.** Click it to open an evidence drawer with the SQL result or the quoted competitor passage. That is our trust advantage.
5. **Honest about uncertainty.** Correlations are labelled as correlations; estimates show ranges, with a confidence badge.
6. **One screen, one question.** "How am I doing?", "What did price do?", "What do customers say?", "How do I compare?", "What now?"

Before → after

TODAY
Run analysis → long report → tick boxes

→

TARGET
Upload → live dashboard in seconds → AI findings layered on charts → action board → 30-day progress tracking

2 · Information architecture

Six screens, each answering one question

A persistent left navigation replaces the single long report. The PDF stays, generated from the same screens.

Overview 1

"How is my business doing?"

- Headline finding + 5 pulse KPIs with sparklines
- Revenue bridge: what drove the change (volume vs price)
- Top problems ranked by severity and ₹ at stake

Data only: instant · AI: headline and ranking

Sales & Price 2

"What did my pricing do to sales?"

- Price vs units vs revenue per product
- Price-change events with before/after impact
- Price position against competitors
- Product mix and concentration

Data only: instant · AI: interpretation

Customers 3

"What are customers telling me?"

- Rating and low-rating trend
- Complaint themes with month-by-month movement
- Return rate by product, linked to complaints
- Quote wall: real review snippets per theme

Data only + tagged reviews

Competitors 4

"How do I compare?"

- Comparison matrix with ahead / parity / behind chips
- Price and rating positioning chart
- Competitor evidence cards, each with a quote and page
- Coverage gaps: what we could not find

Documents + AI extraction

Action Plan 5

"What should I do first?"

- Impact × effort matrix of solutions
- 4-week board: drag actions across weeks
- ROI range, assumptions and owner per action
- Expected effect on each KPI

AI + calculator

Data & 30-day check 6

"Did it work?"

- Upload wizard with mapping preview and quality score
- Before / now / change on frozen KPIs
- Data freshness and history of analyses

Data only

Global behaviours: period and product filters apply to every chart · clicking any number opens the evidence drawer · "Ask about this chart" (Tier 2 chat) docks on the right · every chart can be exported to the PDF.

HEADLINE FINDING

Revenue is down 13.8% since April, driven by volume, not price.

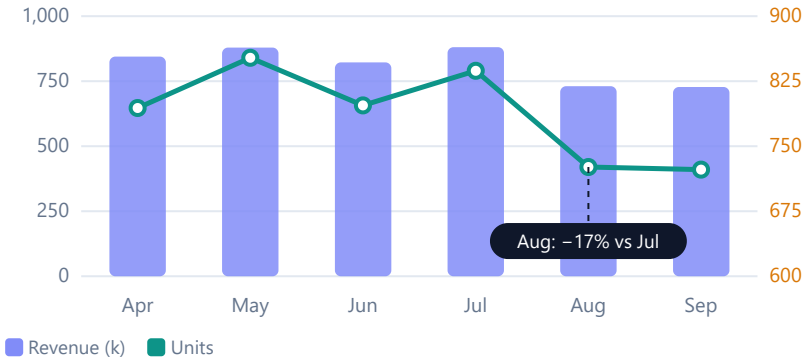

Sizing/fit and packaging damage account for 46% of low-rated reviews. Fixing both is the highest-return move.

Confidence: medium

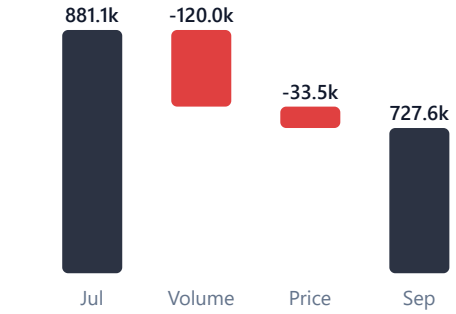

See evidence →

Sales & Price

How price changes relate to volume and revenue

Last 6 months ▾ | All products ▾ | Export PDF

Price vs sales | Price events | Competitor price | Product mix

Product: SKU-01 (15.2% of revenue) ▾

SKU-01 · price (line) vs units sold (bars)

Impact of the price change

Price	1,499 → 1,319	−12.0%
Units / month	100 → 65	−35%
Revenue / month	149.9k → 85.7k	−42.8%

How to read this. Volume fell even though price fell. A discount that does not lift sales usually means demand is limited by something else. Here, low ratings jumped from 27.9% to 36.8% in July. This is correlation, not proof.

Confidence: low · 2 data points after change

Price position vs competitors (typical SKU)

You	1,319
BrightNest	1,319
UrbanHaus	1,349

You match BrightNest and sit 2% below UrbanHaus, yet rate lower (3.70 vs 4.2–4.7). You are priced like the best but not rated like them. Source: competitor catalogues [1][2].

Price elasticity (all price-change events)

Event	Δ price	Δ units	Reading
SKU-01 · Aug	−12%	−35%	no lift
Portfolio · Aug	−4.4%	−13.3%	no lift

Shown only when there are ≥3 months and a ≥3% price move.

Competitors

How you compare, with every claim tied to a source

Last 6 months ▾ | All products ▾ | Export PDF

HEADLINE FINDING

2 competitors · 11 verified findings

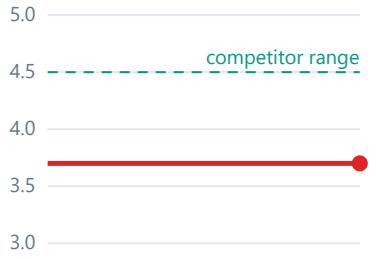

You match competitor prices but trail on rating and on fit reassurance.

UrbanHaus offers a printed size guide, a true-to-size promise and free 30-day returns. Nothing in your data shows you offer these.

Comparison matrix

Dimension	You	BrightNest	UrbanHaus	Verdict
Typical price	**1,319**	1,319	1,349	Parity
Average rating	**3.70**	4.2–4.7	4.5	Behind
Fit reassurance	**Not evidenced**	—	Size guide + true-to-size promise	Behind
Returns policy	**—**	—	Free returns within 30 days	Unknown
Quality & packaging	**19.6% / 15.6% of low reviews**	—	Fit accuracy & packaging praised	Behind
Dispatch	**11.2% complaints**	—	Fast dispatch praised	Behind

Rating position

Your 3.70 vs the 4.2–4.7 competitor range.

Evidence card · UrbanHaus

"Printed size guide in every box and a true-to-size promise."

[7] urbanhaus_catalogue.pdf · p.2 · dated 2026-09-01 quote verified

"Free returns within 30 days for fit issues."

[8] urbanhaus_policy.txt · p.1 quote verified

Coverage gaps

- Your own shipping and returns policy are not in the uploaded data
- No competitor review volumes found
- BrightNest: only 4 findings so far

Action Plan

What to do first, and how it should move your numbers

Last 6 months ▾ | All products ▾ | Export PDF

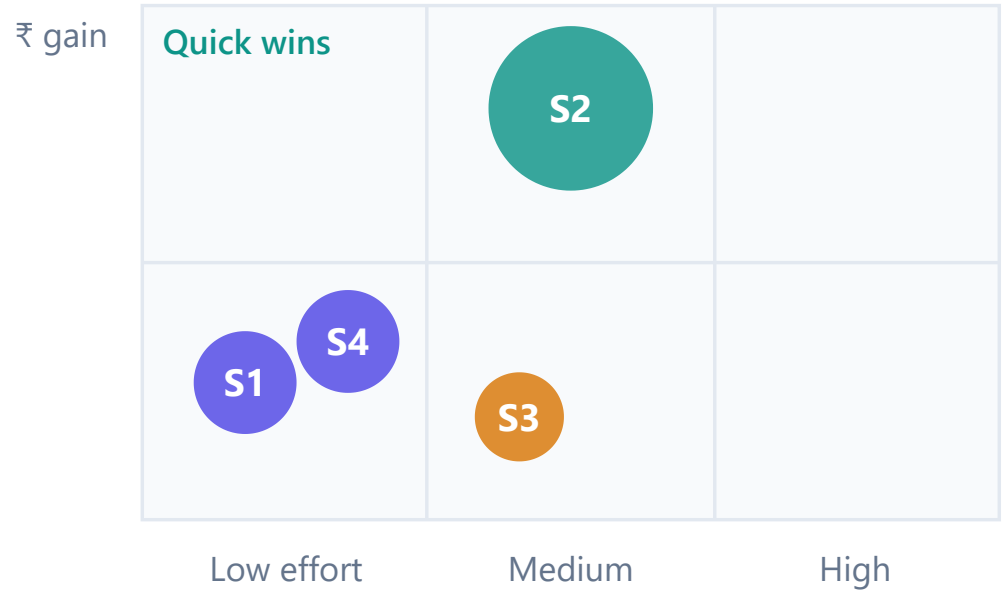

HEADLINE

Assumption-based

Start with printed size guides and better packaging: about ₹14.8–25.6k/month combined.

Estimates assume 8–30% lifts on the affected revenue. Ranges overlap and are not additive.

Impact × effort

Bubble size = estimated monthly gain. S5, S6 have no ROI estimate yet.

30-day plan

drag to reschedule

Week 1	Week 2	Week 3	Week 4
S1 Printed size guide Owner: Priya · due 12 Oct	**S2** Order double-wall cartons Owner: Ops · due 19 Oct	**S2** Switch packaging on top SKUs	**S3** Supplier quality review Owner: Sourcing
S4 Hold pricing steady Owner: Rahul			✓ Re-upload data & run 30-day check 30 Oct

Expected movement if S1 + S2 work: return rate ▼ · low-rating share ▼ · packaging complaints ▼. You will see these tracked on the 30-day check.

S2 · Upgrade packaging to double-wall cartons

top action

Est. gain / month	Effort	Affected revenue	Basis

Run a fresh analysis

Flow: Data → upload new files (replaces old) → data freshness check → comparison. This is already built as an API; the screen above would give it a face.

Mock screen · values illustrative (a real check needs a new upload) · layout is illustrative

3 · Onboarding & mobile

First five minutes, and the phone view

Uploading should feel like setting up a dashboard, not filling in a form. The same screens collapse into a bottom-tab layout on a phone.

Upload wizard

✓ Add sales | ✓ Add reviews | 3 Competitors | 4 Review & run

Drop files here or browse
CSV, Excel, PDF, TXT · any column names

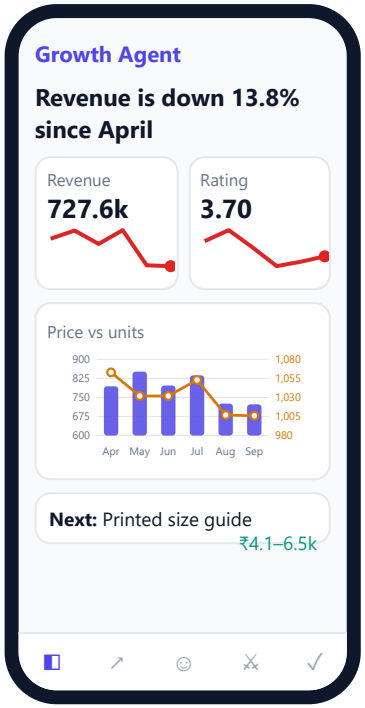

We found these columns in sales.csv

Your column	We read it as	Sample	
Purchase Dt	Order date	2026-09-14	✓
Item Code	Product SKU	SKU-01	✓
Amt Paid	Revenue	1,319	✓
Chk Flag	Pick...	0 / 1	?

96%
Data quality

- 3,134 rows read · 0 duplicates
- Dates parsed 100%
- 1 column needs your choice

Preview unlocked after upload: revenue trend, price trend and top products appear immediately, before the AI runs.

Mobile: sellers often check numbers on their phone. Same data, one chart per card.

States to design, not just the happy path: empty project (guided first upload) · parsing and tagging progress · partial data (e.g. no reviews yet: Customers explains what to upload) · stale-data banner · failed or interrupted run with a Resume button · free-tier limit reached · "delete my data" confirmation.

4 · Indicator catalogue

Every chart, where its numbers come from, and what is new

Most indicators already exist as SQL queries. The UI work is mainly presentation; a handful of derived metrics need new, code-computed (never model-computed) logic.

Indicator	Visual	Source	Status
Revenue / units / orders by month	Combo bars + line	sql_kpis revenue_trend	Exists
Revenue bridge (volume vs price effect)	Waterfall	Derived from the monthly series	New · simple
Average realised price trend	Line with event markers	revenue_trend / sku_trend	Exists
Price vs units per product	Dual-axis combo	sku_trend	Exists
Price-change events + before/after	Annotated chart + table	Detect ≥3% price moves in sku_trend	New · medium
Price elasticity (descriptive)	Table with confidence badge	Arc elasticity on events; hidden if data too thin	New · medium
Price position vs competitors	Dot plot	Step 3 comparison + competitor docs	Exists (as text)
Product concentration / mix	Treemap or bars + Pareto line	sku_concentration	Exists
Rating and low-rating trend	Line	ratings	Exists
Complaint themes and their monthly trend	Bars + small multiples	review_themes + month grouping	Trend is new
Return rate by product	Ranked bars	returns	Exists
Returns vs complaints link	Scatter (SKU level)	returns × themes by SKU	New · medium
Competitor comparison matrix	Table with verdict chips	Step 3	Exists
Impact × effort matrix	Bubble chart	Step 5 solutions + calc_roi	Exists (data)
30-day plan board	Kanban by week	Step 6 + action_plan_items	Exists (data)
Before / now KPIs	Table + deltas	/api/analyses/[id]/progress	Built
Data quality score	Donut + checklist	Validation results from ingestion	Exists (data)

Rule kept from the agent: every number on a chart is computed by SQL or code, never by the model. The AI writes interpretations, and those must cite a chart or a quote.

5 · Technical approach & delivery

How we would build it

Keeps the current Next.js 16 / Tailwind / Postgres stack. No change to the agent.

Approach

- **Stack additions:** shadcn/ui (Radix) for components, Recharts wrapped in our own <Chart> components so the library can be swapped, TanStack Table for sortable tables, lucide icons, dnd-kit for the week board. U0 starts with a one-day compatibility check against React 19 / Next 16.
- **Instant dashboards:** a new `/api/projects/[id]/insights` returns chart-ready series straight from SQL, so charts render right after upload, before the analysis finishes.
- **Caching:** cache insights per project and data version, invalidated on re-upload (use Next 16 Cache Components; read the bundled docs first, per AGENTS.md).
- **Evidence drawer:** one shared component that resolves `sql_kpis:*` and `chunk:N` references already stored by the agent.
- **PDF:** keep print-to-PDF; add a print layout that reuses the same chart components (SVG prints crisply).
- **No agent changes** except a small step-4 field so each problem links to the chart it relates to.
- **Testing:** unit tests for new derived metrics; screenshot checks of each screen at desktop and phone width; extend the existing E2E script.

Phases (about 18 working days)

U0	**Design system & app shell** Tokens, left nav, filters, chart components, empty/loading states	2 d
U1	**Insights API + Overview** Chart-ready JSON from SQL; KPI cards, bridge, problems list	3 d
U2	**Sales & Price** Dual-axis chart, price events, elasticity table, competitor price dot plot	3 d
U3	**Customers** Rating trend, theme trend, returns by SKU, quote wall	2 d
U4	**Competitors** Matrix, evidence cards, coverage gaps	2 d
U5	**Action Plan + 30-day check** Impact×effort, week board (drag), progress screen	3 d
U6	**Onboarding, mobile, polish** Wizard, mapping preview, responsive, accessibility, PDF from screens	3 d

Lean cut, about 11 days: U0 + U1 + U2 + U5. That gives the shell, Overview, Sales & Price (the part you asked for) and the plan board.

Risks: elasticity can mislead with little data (mitigated by confidence badges and hiding it below thresholds) · chart library fit with React 19 (checked in U0) · more screens means more states to test · the in-process runner still limits hosting options.

6 · Decisions needed

What I need from you before building

Reply with your picks, or tell me to use the recommended ones.

1. Scope
Full build (about 18 days) or the lean cut U0+U1+U2+U5 (about 11 days)?
Recommended: lean cut first, then add Customers and Competitors.

2. Look and feel
Light, clean “analytics” style as in the mocks, or a darker, more dramatic style? Include a dark-mode toggle?
Recommended: light first, dark mode later.

3. Elasticity
Show a price-elasticity reading (with caveats) or only the plain before/after impact of price changes?
Recommended: before/after always, elasticity only when data is sufficient.

4. Chart library
Recharts (fastest, good enough) or visx (more custom, more work)?
Recommended: Recharts behind our own wrapper.

5. Chat
Put the “Ask about this chart” chat in this round or leave it for later?
Recommended: later (it is Tier 2 in the PRD).

6. Name & branding
Keep “Growth Agent” as a working name, or do you want a product name and logo direction?
Recommended: working name for now.

Not changing: the agent, the evidence gate, data ingestion, the database. All of it feeds the new screens as it is today.
